### Search Notes

Faye,

Attached is the completed search for a foam rocking horse. I searched the inventors in the patent literature and the results are included. I did an extensive search on the requested topic in bibliographic and full-text databases as well as on the Internet. I found a couple of items that I think might help you – they are marked with green flags. Please be sure to look over all the results as there may be other items of interest. I have attached the search strategies used for the searches performed.

If you have a moment, please fill out the attached STIC Feedback Form. If there is anything I can do to refine or revise this search, please let me know.

Sincerely,  
Ethel Leslie

Abstract (Basic): WO 200187442 A1

NOVELTY - The horse (1A) has an arrangement for rocking in a curved bottom of it's base (3) in the vicinity of an end (3a) of an elastic and flexible foam plastic structure (6). The structure consists of ridges or similar protruding members transverse to the direction of curving so that the cross section of the structure in side-view is comb-like. The ridges or protruding members yield and bend by the action of the mass and the rocking motion (B) of the horse allowing the device to move.

USE - None given.

DESCRIPTION OF DRAWING(S) - The figure shows a schematic side view of an embodiment of the rocking horse .

Rocking horse (1A)

Base of rocking horse (3)

End of foam plastic structure of rocking horse (3a)

Foam plastic structure of rocking horse (6)

Rocking motion of horse . (B)

Abstract (Basic): DE 19860830 A1

NOVELTY - Unitary main body (1) of child's rocking toy comprises resilient **plastic** . Its base has a singly curved surface (2). The seat area (3) is molded in .

USE - Used as a **rocking horse** . Brings visible delight and healthy exercise.

ADVANTAGE - There is no danger of trapping between a fixed object and the toy. There are no potentially dangerous mechanical linkages. Stylization offers a more simply manufactured shape. The seat can be formed in deeply for good support, to prevent falls. The broad base enhances stability.

DESCRIPTION OF DRAWING(S) - Toy in perspective view.

Abstract (Basic): DE 19839264 A1

NOVELTY - The **rocking horse** has a body (1) with seat (11), and legs (2) with feet (3). When a rider sitting on the seat displaces his body weight to left and right, the body moves alternately to left and right, and causes the legs to execute a walking movement. The body has four legs, arranged in opposite pairs, and the legs are moveable in longitudinal direction, but are non-moveable at right angles to that direction. Body and/or legs are of thermoplastic material or timber.

USE - As a child's toy.

ADVANTAGE - More attractive play.

DESCRIPTION OF DRAWING(S) - The drawing shows a side view of the **rocking horse** .

Abstract (Basic): FR 2548034 A

The **rocking horse** has a body (1) that is articulated to a base (15) by front (8) and back uprights (9). These pivot on axles on the body (10,11) and the base (14,15) and form a parallelogram.

The uprights are pulled back to a central position by a **rubber sleeve** (20) that is stretched between two removable bars (21,22). These bars are fixed on the ends of two arms (24,25) which are fixed on the centre of the uprights.

USE/ADVANTAGE - The wooden **rocking horse**, for children's play-grounds, is simple, light and cheap to manufacture.

**Toy rocking horse which can be moved forward automatically - has rear legs or rods which are articulated and move on rocking**

Patent Assignee: SCHWEIZER O (SCHW-I)

Number of Countries: 001 Number of Patents: 001

Patent Family:

Patent No	Kind	Date	Applicat No	Kind	Date	Week
FR 2253540	A	19750808				197539 B

Priority Applications (No Type Date): FR 7344078 A 19731210

Abstract (Basic): FR 2253540 A

The toy (1) has wheels (4) on which it rolls forward and a block (5) which stops its advance. On rocking backwards the articulated legs (2) are pressed onto the ground which propels the toy forward on the wheels. On rocking forward the block is pressed onto the ground which stops the forward movement and puts the articulated legs into the right position for a further forward movement. The body of the toy (1) can be of any shape and can be made in wood or in **plastics**. The device can also be used for moving heavy weights in factories.

Patent Family:

Patent No	Kind	Date	Applicat No	Kind	Date	Week
IT 750007	B					196800 B

Priority Applications (No Type Date): IT 650 A 19651209

Abstract (Basic): IT 750007 B

Improvements in the production of **plastic** toys, particularly **rocking horses**, manufactured from blow-moulded parts which can be readily assembled or dismantled. In the case of a **rocking horse**, the parts comprise (a) the body, (b) the front and back legs, each pair of which are a single extension piece of the body and carry at their termination a transverse slot opening into a hole, which fits over a central flat portion on (c) **plastic** rods used to hold (d) the separate curved rocking plates together by means of **plastic** units screwed onto the threaded ends. The rod rods are prevented from turning in the rocker plates by fitting them into square section holes in the plate and have a square or hexagonal part on the end of the rod just beyond the terminal thread.

The part can be produced at low cost, are strong and durable and can be replaced when worn out. Transport and packing costs are reduced by dismantling before shipping

#### ABSTRACT

PROBLEM TO BE SOLVED: To apply a soothing effect to an old person or a dementia patient by arranging a backrest with a high-back specification, a seat face, a pair of leg sections made of hard steel wires and arranged obliquely, downward, and forward from the right and left end sections of the backrest, and a U-shaped pedestal fixed with the lower sections of the leg sections.

SOLUTION: This **rocking chair** 10 has a backrest 11 with a high-back specification, and a seat face 12 extended obliquely downward at the tip section is fixed to the lower end section of the backrest 11. The inner skeleton structure of the backrest 11 and seat face 12 is made of a steel in view of strength and durability, a surface sheet is made of antibacterial vinyl **leather**, and chips are stored inside. A pair of leg sections made of two parallel hard steel lines with the diameter of about 10 mm are provided in the downward curved state obliquely, downward, and forward from the right and left end sections of the backrest 11. The lower ends of the leg sections 13 are bent and fixed to a nearly U-shaped pedestal 14, and a pair of trapezoidal stoppers 15 are arranged near the tip sections of the pedestal 14.

Abstract (Basic): DE 19860830 A1

NOVELTY - Unitary main body (1) of child's **rocking toy** comprises resilient plastic. Its **base** has a singly **curved** surface (2). The seat area (3) is molded in .

USE - Used as a rocking horse. Brings visible delight and healthy exercise.

ADVANTAGE - There is no danger of trapping between a fixed object and the toy. There are no potentially dangerous mechanical linkages. Stylization offers a more simply manufactured shape. The seat can be formed in deeply for good support, to prevent falls. The broad base enhances stability.

DESCRIPTION OF DRAWING(S) - Toy in perspective view.

Main body (1)

Base (2)

Seat (3)

pp; 4 DwgNo 1/2

Patent Details:

Patent No	Kind	Lan	Pg	Main IPC	Filing Notes
US 4674795	A		9		

Abstract (Basic): US 4674795 A

The material of the seat, such as fabric or **leather**, is supported by the frame in partial tension to avoid sagging and to allow independent torsional movement of the seat portions supporting each leg of the chair user. The chair frame geometry and the tensioned seat provide a flexible chair that provides a new seating experience that combines lounge and **rocking chair** type characteristics.

Additionally, the chair frame can be provided as a one piece rigid frame or a stackable, foldable, or collapsible frame.

USE - A chair frame for supporting a seat and seat back.

*Polystyrene block roughly carved*

## GEMMA BUILDS A ROCKING HORSE

One day Gemma decided to build a large rocking horse. She had to build her own because ready made ones were too expensive and too small. The problem is how could she make a large horse on a small budget? The answer was to make a mould and use glass reinforced plastic (GRP) or fiberglass.

Gemma decided it would be easy to shape her horse from expanded polystyrene foam. This can be cut with a saw, shaped with a surform and sanded with ordinary production paper, 40 and 60 grits. The project continues .....

*Polystyrene rough first shaping*

**See Gemma's other projects:** [Robot Design](#) [Electric Cycle](#) [Windmill Generator](#)

We believe every horse, pony and donkey has the right to be part of a loving family where it will be cared for and loved to the end of its natural life.

Abstract (Basic): DE 19860830 A1

NOVELTY - Unitary main body (1) of child's rocking toy comprises resilient plastic. Its base has a singly curved surface (2). The seat area (3) is molded in .

USE - Used as a **rocking horse** . Brings visible delight and

healthy exercise.

ADVANTAGE - There is no danger of trapping between a fixed object and the toy. There are no potentially dangerous mechanical linkages. Stylization offers a more simply manufactured shape. The seat can be formed in deeply for good support, to prevent falls. The broad base enhances stability.

DESCRIPTION OF DRAWING(S) - Toy in perspective view.

Main body (1)

Base (2)

Seat (3)

pp; 4 DwgNo 1/2

Title Terms: CHILD; ROCK; TOY; STYLE; ROCK; HORSE; COMPRISE; SEMI; RIGID; PLASTIC; FOAM; WEAR; RESISTANCE; CURVE; BASE

Derwent Class: A86; P36

International Patent Class (Main): A63G-013/06; A63G-015/00; A63H-033/00

International Patent Class (Additional): A63H-033/00

File Segment: CPI; EngPI
